Letter of Recommendation

Dear Sir/Madam,

As the Hungarian subsidiary of Geberit, we regularly cooperate with Ventusus Kft. in various projects, which are realized in 3D modelling mechanical design. During our partnership so far, Ventusus Kft. has demonstrated its commitment to quality and innovation, aligning itself with Geberit's value system, and repeatedly uses our product systems to implement its design tasks.

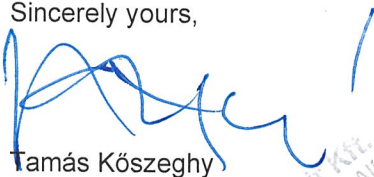

Their experience in engineering solutions and plumbing design is reflected in the successful implementation of many projects, of which the Pick Arena in Szeged stands out. The mechanical system of the Pick Arena is the result of the dedicated design work of Ventusus Kft., creating and implementing solutions that prioritize the comfort of both sports teams and spectators. The arena can accommodate 8,500 people (it can be expanded to 10,000 people for concerts) on a total area of 30,000 m², it offers an excellent sports and entertainment experience, and it is a center of national importance in sports life.

Another prominent reference for the engineering application of Geberit systems is the "Balance Garden" investment, a newly built residential building in Budapest consisting of 300 apartments, which consists of seven additional floors above the basement and ground floor installation. Ventusus Kft. also used the Geberit PEHD piping system for the design of the sewage network of the more than 16,000 m² building. Our design partner used Geberit Mapress Carbon Steel for the heating system, and our Geberit Mapress stainless steel pipes for the water supply.

On behalf of the Swiss company Givaudan, the world's leading producer of industrial and cosmetic raw materials for food, Ventusus Kft. implemented a part of the energy efficiency-enhancing systems of its production plant in Makó, Hungary, in accordance with the strict production technology regulations, using our Geberit piping solutions.

In addition to these projects, Ventusus Kft., with its high-quality 3D engineering and plumbing design solutions, is also an esteemed and careful user of Geberit systems in its everyday design activities. During our joint work, we were able to confirm their commitment to innovation and their technical expertise, the focus of which is determined by the expectations of their customers. We thank Ventusus Kft. for their excellent trust and trust that we can continue to work together in the future on their projects and technical solutions that require specialized expertise.

Sincerely yours,

Tamás Kőszeghy
Managing Director
Geberit Kft.
